Overview

As the name suggests, Station or Passenger Information Systems are designed to provide commuters with scheduled visual information on route details, destination, time to departure and messages concerning service status.

Axent Station Information Systems are fully customized to individual application requirements and are available in a variety of size and character height configurations, single or double sided.

System ships with user-friendly software which allows the operator to modify all aspects of the system including:

- Modify route times
- Changing the route status, such as cancel, delay and test
- Display advertising messages
- Modify station names
- Update entire timetables
