## PRODUCT SPECIFICATION SHEET (AX-PS600MTRX-G)

# PYLON TRUCK STOP, 600MM DIGIT

### Product Key Features

- Automatically adjusts brightness in ambient light conditions
- Real time price indicator updates
- High visibility in all weather conditions
- Australian designed and manufactured
- Complies with all Australian design standards
- Tailored to clients specifications and unique requirements
- Wide angle viewing
- Many incorporated functions such as:
  - Self Diagnostics
  - Blanking the display
  - Interface with any controller
  - Flashing any or all of the display
  - Dynamically changing any or all of the display
  - Automatically dimming for varying light conditions

## Overview

Axent Service Station Signs are the innovative and practical way to showcase pricing information for all mediums, such as petrol stations. Axent manufactures high intensity LED board indicator boards with a user friendly interface and a variety of features.

Service Station Signs or Price Indicator Boards offer a valuable Real Time updating feature which ensures critical pricing information that can be viewed immediately.

The display consists of four digits – namely a leading ‘1’ followed by three digits capable of showing zero through to nine, together with a decimal point located on the lower edge between the last two digits (ie: 107.2).

The boards can be retrofitted into existing signs and are available in a range of colors including red, amber, white, green or blue. Character height can be customized to each clients requirements while communication with the sign can be Ethernet, data radio or GSM/GPRS.
